One of the Finest in its Genre

By G. A. Schoenagel

This text is quite a gem. The chapters do not need to be studied sequentially, as the authors wrote so as to create each chapter as independent from the others as possible. Within chapters, the separate sections are also somewhat independent. The pace in each chapter starts slowly and simply, and then quickens to more advanced material. Emphasis is placed on underlying principles throughout. Problem sets are also creatively

arranged, from the simple progressing to more advanced. Highlights include a beautiful first chapter on sequences and series,

chapter two on nonlinear differential equations is a treat, and chapter six on vector field theory is crystal clear.

An appendix compares Riemann to Lebesgue Integration in a simple manner. Each Chapter in this text is a delight.

I would be remiss if I did not single out the Chapter Seven, pertaining to Partial Differential Equations:

Simply put, one

of the best single-chapter introductions to be encountered. D'Alambert's formula derived, Laplace and Dirichlet problems

discussed, Solutions by Integrals Transforms and Green's Functions expounded with the utmost of clarity (All in 100 Pages).

Merely a thorough foundation of calculus is prerequisite.

Highly Recommended !

Classical Applied Mathematics Text

By A civil engineer

I have this text (and its like new) from back in my University days. Although not a prescribed textbook it always got me out of trouble in advanced engineering maths. Its a classical text on Applied Mathematics. Along with Boas Mathematical methods in the Physical Sciences I give them both 5 stars.

Still a classic

By Paul O'Shaughnessy

I ordered a new copy of this book after losing my original from university days. I have found it occasionally invaluable in engineering for twenty years - basically "everything you ever wanted to know about math" in a relatively compact text, without being one of those huge and awful multi-author collection "handbooks". The fact that it is still in print from the 1960's bears out that I am not the only one with this opinion.
